EDUCATION

University of California Santa Barbara

Expected Jun 2026

Bachelor of Science (B.S.) in Mechanical Engineering - GPA 3.9

EXPERIENCE

Mechanical Engineering Intern

June 2025 – Sep 2025

Intuitive Surgical

- Performed RCA on failing captive parts, developed installation tool in SolidWorks to prevent damage and incorrect assembly during insertion, created tolerance stack to support future design change to mitigate failure mode
- Executed RCA on failing press-fit part, proposed redesign based on tolerance stack and CMM data, and wrote documentation and justification following design change procedure, resulting in two part changes
- Designed tensile force and leak test fixtures and ran DoE to streamline prototyping and testing of different manufacturing methods and designs for a part, reducing testing time by as much as 80%

Powertrain Manufacturing Engineering Intern

May 2024 – Sep 2024

Joby Aviation

- Designed tool for filling battery modules with potting compound in SolidWorks, ran sub-scale tests using 3D-printed prototypes to validate fill level and dispersion, wrote MWI, and trained technicians
- Administered a weld fatigue characterization study to set a minimum requirement for the number of spiral welds, ran representative samples on an Instron, and compiled data using a VBA script, decreasing reworks by 12%
- Overhauled battery module thermal test stand, simplifying fluid system for ease of operation and data accuracy

Mechanical Engineering Intern

Jun 2023 – Jan 2024

Healthy Tech LLC.

- Designed consumer biomedical electronics product using Fusion 360 following DFM principles for injection molding, corresponded with manufacturer to create 3 molds, resulting in the production of 4000+ parts
- Developed Low-Energy Bluetooth application in C on the Zephyr RTOS for an nRF SoC and programmed I^2C and SPI drivers to collect and broadcast temperature sensor data and run LEDs

Undergraduate Lab Assistant

Jun 2023 – Present

California NanoSystems Institute – CNSI

- Identified failure points in a silane deposition tool, re-designed in SolidWorks to be safer and easier to operate; manufactured, tested, and wrote the SOP, decreasing maintenance time by 75%
- Led team of 3 to develop, prototype, and manufacture wind tunnel fixture frame and tensioning mechanism, decreasing alignment tolerance and decreasing experiment setup time by 80%

Undergraduate Research Assistant

Sep 2022 – Jun 2023

Hansma Lab

- Designed 3D-printed handheld prototype in SolidWorks to replace a tabletop biofeedback device, allowing subjects to take devices home to collect 14x more data
- Evaluated and coordinated the use of injection molding to manufacture device cases, designed injection molds in Onshape, SLA 3D-printed molds, and produced 46 units 98% faster and 60% cheaper

SKILLS

Design and Analysis: SolidWorks, DFM, GD&T, FEA, Fusion 360, Ansys, KiCad, Python, Matlab, Onshape, Blender

Manufacturing: Manual/CNC Mill, Lathe, 3D Printing (FDM, SLS), Laser Cutting, Waterjet
